A further look into Traube Tents and Structures

Money-Saving Temporary Structure Creates New Inspection Space, Improves Efficiency for Vehicle Manufacturer

OEM SYSTEMS, LLC.

OEM Systems is recognized worldwide as a manufacturer and outfitter of delivery vehicles, ground support equipment and emergency rescue vehicles. Responsible for customizing entire fleets of trucks, OEM often requires additional warehouse space to conduct final inspections of vehicles coming off the assembly line. In 2006, OEM engaged Traube to create an all-weather, temporary building that was secure and accessible to the current assembly line.

Solution

Given the challenge to provide a new, yet cost-efficient temporary warehouse space in close proximity to the current assembly line, Traube's site evaluation team examined OEMs production space and recommended a semi-permanent structure. The resulting enclosure, used intermittently for several years, enabled OEM Systems to roll trucks directly from the assembly line into the large-capacity, temporary building for final inspection. It was important to OEM that we provide them the additional workspace they needed immediately, said John Traube, president of Traube Tents and Structures. Portable and scalable, the structure was essentially used or removed based on OEMs current space and needs.

Results

Traube's semi-permanent solution helped OEM Systems save approximately 35 to 40 percent, when compared to storage sheds or permanent buildings that require a foundation. In addition, the new space enabled the team to use time and resources more efficiently, because OEMs inspections are now performed in an all-weather, clean and secure shelter, and are no longer dependent on fair weather.

“OEM Systems uses only Traube. When we call the Traube team, explain our situation, the timeline and the issue, Traube responds every time with customized solutions. The team's timely and professional setup and removal made my job easier. Another big seller is cost-effectiveness. Traube is more reasonable than any other option on the market.”
